Finally!

Thank you for the opportunity to serve you and to establish this win-win program which will help keep your company on the leading edge with excellent, experienced, English speaking workers while helping our workers contribute to Saskatchewan’s economic development.
The “natural growth rate” has fallen to 2,000 persons per year from over 10,000 in the early 1980s. It will continue to be low.

That means the size of the provincial population will be determined by migration to an even greater extent than it is now.
