

The Dean, Faculty of Agriculture to present the following for the  
**Conferment of the Degree of Doctor of Philosophy (Agriculture)**

ACHAM Hedwig (Ms)

Ms Acham investigated the relationship between introduction of UPE has seen massive enrolments into school in Uganda. However, academic achievement especially in the rural is poor. Limited data was available on the strength of the association between nutritional status, health and academic achievement in Uganda. Ms Acham studied the strength of these associations in cross-section of primary school-children in Kumi district (Eastern Uganda). Findings revealed that poor nutritional status and health reduced chances of good achievement. Above all, feeding, maternal education and attendance significantly predicted children's achievement. There is need for comprehensive school health and nutrition programming in schools and to re-think school feeding, which can act as safety nets especially for rural children. Acknowledgement: NUFU, Carnegie, Professors JK Kikafunda, Thorkild Tylleskar and Marian Malde.

KATUROMUNDA Sylvester

Katuromunda determined whether supplementing Napier grass diet fed to dairy cows with forage legumes improves feed intake and manure quality of the ensuing manure. Supplementation improved the feed intake, and in turn increased milk output. He also found that better techniques of handling and storing cattle excreta leads to production of high quality manure compost, which in turn improves the yield and quality of fodder when applied alone or in combination with inorganic fertilisers. This research was supervised by Prof. Elly Sabiiti and Prof. Mateete Bekunda. Rockefeller Foundation and Sida-SAREC provided the research funds.

MAGALANYAGO Christine Solomy Bogere (Ms)  
OTSYULA Reuben Masheti  
WALEKHWA Peter Nabusi

TIBAYUNGWA Francis

Tibayungwa developed models of livestock-forage dynamics, as well as nutrient recycling in smallholder dairy systems. The research was driven by the desire to provide dairy farmers with information for timely decision making with regard to utilization of planted forages for optimal animal performance. The developed models offer comprehensive understanding of livestock-forage interactions that is crucial for improved productivity and sustainability of the smallholder dairy systems. Research was supervised by: Prof. J.Y.T. Mugisha (Faculty of Science), Dr. Nabasiye (Faculty of Agriculture), with financial support by I@Mak.

TUMUHAIRWE John Baptist

Tumuhairwe worked on turning Municipal Organic Solid Wastes into wealth through composting. The study was driven by desire to recycle plant nutrients that would be lost to landfills. He used the next-generation pyrosequencing technique to establish the abundance and diversity of microorganisms driving the composting process, and identified potential enhancing inoculum species. He established that composting process management is more critical than the technology used. Maturity indices for assessing compost quality were generated. The study was supervised by Dr. John Stephen Tenywa, Prof. Erasmus Otabbong, Assoc. Prof. Stig Ledin assisted by Assoc. Prof. Nils Högborg and Prof. Frederick Asiegbu. Sida/SAREC funded the study.

The Dean, Faculty of Technology to present the following for the  
**Conferment of the Degree of Doctor of Philosophy, joint award with the Royal Institute of Technology Stockholm, Sweden (Civil Engineering)**

KIZITO Frank

Kizito investigated ways in which the degree of adoption of formal

decision support tools in practice, generally perceived to be low, could be improved. Using an Action Research approach, he developed prototype tools and applied them to address real-life problem issues within an urban water supply utility. Through this process, framework for development of decision support systems for water supply management was proposed.

KULABAKO Robinah (Ms)

Kulabako assessed the environmental sanitation situation, anthropogenic pollution loads and their transport and impact in Kampala's Peri-urban areas. She found that peri-urban residents in Kampala are faced with inadequate basic services collectively caused by institutional, legal and socio-economic issues; and that the communities' coping strategies are detrimental to their health. Excreta disposal systems, solid waste and grey water are major anthropogenic pollution sources contributing to widespread shallow groundwater contamination. She revealed that the sub-surface soil was anthropogenically influenced and played limited role in pollutant attenuation. She developed preliminary numerical model which depicts how the shallow groundwater system responds to rainfall infiltration rates and the various processes that govern pollutant (phosphorus) transport therein. The study points to the need for preparation of multidisciplinary applied research framework for monitoring environmental sanitation and impact of interventions in support of the National Development Plan.

The Principal, College of Health Sciences to present the following for the

**Conferment of the Degree of Doctor of Philosophy, joint award with Karolinska Institute Stockholm, Sweden (Medicine)**

ODIDA Micheal

The Dean, Faculty of Technology to present the following for the **Conferment of the Degree of Doctor of Philosophy, Joint award with the Royal Institute of Technology Stockholm Sweden (Mechanical Engineering)**

OLUPOT Wilberforce Peter

Olupot characterized ceramic raw minerals from selected deposits in Uganda and developed method for production of high strength electrical insulators from them. He subsequently applied the studied materials and developed composition for electrical porcelain insulators with sintered microstructural features that are responsible for increased strength. This research shows that various high quality glazed porcelain ceramic products can be produced from the available ceramic minerals in Uganda. The research was funded by sida/SAREC- Makerere University Bilateral research program.

The Dean, College of Health Sciences to present the following for the **Conferment of the Degree of Doctor of Philosophy (Medicine)**

KATUURA Esther (Ms)

Katuura, investigated efficacy and safety of some plants traditionally used in treatment of malaria in vitro; the study revealed number of plants that can be used as sources of efficacious and safe herbal remedies for malaria treatment. The study reveals the need to use controlled doses of these plants. The study was supervised by Prof. Jasper Ogwal - Okeng, Prof Remigius Bukonya - Ziraba and Associate Prof. Paul Waako. Funding was received from NUFU and Sida/SAREC.

NSOBYA Sam Lubwama

Nsohya identified novel changes of complexity of infection of *Plasmodium falciparum* during isolates adaptation to in vitro culture using molecular techniques, and showed evidence for decreased susceptibil-

ity to amodiaquine pending treatment with regimens containing this drug. In addition he provided important baseline data to further evaluate the in vitro susceptibility of parasite strains in Uganda and assess any signs of emerging resistance. The study provides useful information on the prevalence of mutations in *pfprt* and *pfmdr1* genes and their association with elevated drugs IC50's. Professor Moses Joloba and Professor Philip Rosenthal supervised this work. Fogarty International Center provided financial support.

OKWI Andrew Livex

The Director, Institute of Environment and Natural Resources to present the following for the **Conferment of the Degree of Doctor of Philosophy (Environment and Natural Resources)**

AYEBAZIBWE Chrisostom

Ayebazibwe, examined the risk factors and the role of wildlife in the epidemiology of foot-and-mouth disease (FMD) in Uganda. The majority of the African buffalos sampled in four Ugandan national parks had antibodies against foot-and-mouth disease virus. SAT 1 and SAT 2 viruses were obtained from apparently healthy African buffalos. In cattle, FMD outbreaks tended to occur more frequently during the dry season and especially along the cattle corridor (2001-2008). Drs. Kirsten Tjørnehøj and Muwanika Vincent, supervised this research, funded by DANIDA.

BALINDA Sheila Nina (Ms)

Balinda investigated the importance of goats and sheep in the epidemiology of foot-and-mouth disease in Uganda. She also sought to identify processes that may be responsible for the multiplicity of foot-and-mouth disease viruses in East Africa. Although not commonly considered in control programs, results from this study show that small ruminants play an important

role in maintenance of FMD in Uganda; and that husbandry practices that minimize movement of animals may limit disease spread even in high risk areas. . Additionally, viral populations in East Africa were found to be shaped by complex evolutionary forces and that this complicates efforts towards disease control. Dr. Vincent Muwanika and Associate Prof. Hans Siegismund supervised this work. The research was funded by DANIDA.

MUNYULI Bin Mushambany Theodore

Mr. Munyuli examined the diversity of pollinators and assessed the economic value of pollination services delivered to crops in Uganda. He sampled pollinators using conventional and innovative sampling methods. He applied correlative methods to establish linkages between pollinator diversity with land-uses and landscape factors. He also determined the monetary value of pollination services delivered to coffee in Uganda using ecological economic approaches. He found that central Uganda harbored diverse pollinator communities that delivered pollination services of high economic value. He also outlined strategies to conserve habitats for the protection of pollinators for crop productivity enhancement and food security strengthens in Uganda. Associate Professor Philip Nyeko and Dr. Simon Potts supervised the work that was funded by Darwin Initiative (Defra, UK-Government).

NALUGWA Allen (Ms)

Ms. Nalugwa, investigated the identity and distribution of the *Bulinus* freshwater snails that are potential intermediate hosts of bilharzia tropical neglected disease infecting over 200 million people worldwide and spreading in sub-Saharan Africa. The study Genetic Variability, Molecular Characterization and Distribution of Species in the Genus *Bulinus* (Gastropoda: Planorbidae) was carried out in the Albertine Rift, East Africa with use of DNA molecular techniques. Five *Bulinus* species were identified across the Albertine Rift great lakes, the crater lakes, numerous temporary and

permanent ponds, swamps and streams. The study was supervised by Dr. Silvester Nyakaana, Dr. Aslak Jørgensen and Prof. Thomas Kristensen.

SANGULA Abraham Kiprotich

Sangula investigated the significance of evolution in the maintenance of foot-and-mouth disease viruses in East Africa in general and Kenya in particular. For some viruses, high rate of turnover was observed and for others, unexpectedly little change was observed over the last 40 years. These results have implications for foot-and-mouth disease control in East Africa. Dr. Vincent Muwanika and Associate Prof. Hans Siegismund supervised this work. The research was funded by DANIDA.

TWESIGYE Kakuhikire Charles

Twesigye investigated the amount, distribution and patterns of genetic diversity in native and introduced populations of the Nile tilapia (*Oreochromis niloticus*) from seven East African Great Lakes using molecular techniques. The study determined genetic structuring of *Oreochromis niloticus* populations from the East African Lakes which is crucial for setting priorities for the management and conservation of this species throughout its range in East Africa. Professor Wilson Byarugaba and Professor Peter Arctander supervised this work and the Danish International Development Agency (DANIDA) provided research funds.

The Dean, Faculty of Science to present the following for the  
**Conferment of the Degree of Doctor of Philosophy (Science)**

KWETEGYEKA Justus

Kwetegyeka studied fatty acid profiles from the heart and muscle tissues of fresh water fish and established method for differentiating between fish species and populations from Lakes Kyoga and Victoria. He determined the nutritional value of freshwater fish, established that they had low fat, but

were endowed with high unsaturated fatty acids which are good for human health. The method can be used in fisheries management and in aquaculture to improve the quality and quantity of fish. The late Assoc. Prof. George Mpango, Prof. Otto Grahl-Nielsen and Prof. Bernard Kiremire supervised this work. Makerere University-NUFU Project and Kyambogo University provided financial support.

MBEIZA Mutekanga Norah (Ms)

TWESIGYE-OMWE Moses Nduhira

Twesigye-omwe, investigated the microstructure of wood species that exhibited hexagonal cell structure. From the cell wall geometry revealed by using an electron microscope, he developed mathematical model for predicting mechanical properties of timber. The model was used to calculate Young's modulus of elasticity. The results agree with experimental values obtained by direct measurements in the laboratory. The research was motivated by the desire to develop non-destructive method for determining mechanical properties of timber when only thin samples are available as this would reduce on waste that is associated with other methods. This study was supervised by Professors Eldad J.K.B. Banda and Jackson Mwakali. Financial support was received from Kyambogo University.
