

WEDNESDAY, January 21, 2015

College of Engineering, Design, Art And Technology

The Principal, College of Engineering, Design, Art And Technology to present the following for the Conferment of the Degree of Doctor of Philosophy (Electrical Engineering)

BAKKABULINDI Geoffrey

"Planning of Low-Cost Electricity Distribution Networks for Rural Electrification"

Mr. Bakkabulindi's research focused on the development of mathematical models for planning rural electricity distribution networks. He modelled the low cost technology Single Wire Earth Return (SWER), which uses one overhead conductor and the ground to conduct electricity. There are safety challenges of conducting electricity through the ground in SWER systems. The research developed new planning models to minimize capital and energy losses costs, while considering the operational and safety constraints of SWER. The models optimized both overhead conductor selection and line routing for safe system operation. The research will contribute to increased access to electricity for remote rural communities. Special thanks to the Doctoral Committee and PhD supervisors: Prof. Izael Da Silva, Prof. Eriabu Lugujo, Prof. Mikael Amelin and Prof. Lennar Soder. The study was funded by the Swedish International Development Agency (Sida).

Conferment of the Degree of Doctor of Philosophy (Mechanical)

SENFUKA Christopher

The Principal, College of Engineering, Design, Art and Technology to present the following for the Conferment of the Degree of Doctor of Philosophy (Civil Engineering)

KUSEMERERWA Kahuma Adolf

MUJUGUMBYA Paul

The Principal, College of Engineering, Design, Art and Technology to present the following for the Conferment of the Degree of Doctor of Philosophy (Electrical)

MUSINGUZI Wilson Babu

"Thermal Characterization and Modeling of Woody Biomass Gasification for Small-Scale Combined Heat and Power Application"

Mr. Musinguzi's research focused on developing a small scale biomass-fired combined heat and power system applicable to Uganda's local conditions. Experimented on fuel, modeled the gasification phenomena and analyzed the exergoeconomics to ascertain the system efficiency and cost. The research revealed the opportunities for efficiency improvement through process intensification. The research further revealed fuel properties and system parameters relevant to design and operation of a biomass-fuelled CHP system for improved performance. These discoveries are crucial in decision making during implementation and guide investment in such Technologies and also feed into policy formulation on Biofuels. Special thanks go to the Doctoral Committee and supervisors Assoc. Prof. Mackay Okure, Dr. Adam Sebbit and Prof. Terese Lövås. The graduand further extends his gratitude to NORAD for funding this research.

The Principal, College of Engineering, Design, Art and Technology to present the following for the Conferment of the Degree of Master of Architecture

KASSONGO Raymond

The Principal, College of Engineering, Design, Art and Technology to present the following for the Conferment of the Degree of Master of Science in Civil Engineering

AYOR Andrew Semakula

KAAMU Wabuna Richard

SEMIYAGA Swaib

TUMWINE William Sharpe

OKIRYA Martin

The Principal, College of Engineering, Design, Art and Technology to present the following for the Conferment of the Degree of Master of Engineering (Civil)
