"Socio-economic effects of Foot and Mouth Disease (FMD), and Contagious Bovine Pleuropneumonia (CBPP) outbreaks along the cattle marketing chain in selected districts in Uganda"

Sylvia Baluka assessed the impact of FMD and CBPP outbreaks and their mitigation measures on the various actors using surveys, case studies and market analysis. Farmers with small and medium herds incurred higher control costs whereas large herds experienced the highest milk losses during outbreaks. Mortality losses accounted for the highest proportion of the total CBPP economic cost for all herds. Total income earned by all actors along the cattle-beef marketing chain greatly reduced during outbreaks. Revenue from cattle markets in the study areas reduced during the outbreaks. Smallholders incurred higher costs of controlling FMD and CBPP. Treatment costs were higher than vaccination costs. Farmers should invest in vaccination rather than wait to incur higher treatment costs. Cattle marketing chain actors should invest in appropriate prevention and control measures. Government of Uganda must retain the responsibility for prevention and control of these diseases. This study was supervised by Prof. Michael Ocaido, Prof. Anthony Mugisha and Prof. Eria Hisali, and funded by DAAD and Carnegie Corporation of New York in collaboration with Makerere University.
