About the GAMSU Database Management System

Definition of a Database

A **database** is an organized collection of data stored and accessed electronically.

The GAMSU DBMS is to create a platform to track and monitor grants within the university and effect efficient administration and management of grants with compliance to university laws and laws of the government of Uganda

The System is being customized to the Makerere University business process operations as well as integrate with all units and colleges grants system as guided by the Makerere University Digital Enterprise Architecture and the national eGovernment framework.

Benefits of the GAMSU Database and Management System

1. Staying Compliant

Each of your grants likely have numerous compliance regulations that you need to understand and adhere to, and as recipients, you will need to undergo periodic compliance reviews to assure requirements are being met. Some of these requirements include eligibility of reimbursed expenses, adherence to procurement requirements, financial management oversight and more.

2. Generate Data For Reporting

Grant management is often linked to audits which are time-consuming processes. Grant funders typically have reporting requirements, including financial updates and progress checks.

3. Timely generation of reports for decision makers.

4. Organise your information in one place

Access your data- history, due dates, reporting requirements, contacts, goals, budget and more. No more binders, no more shuffling through papers. Instead, you'll have searchable data all in one place.

5. Manage all grants from start to finish.

Track every detail of the process from start to finish, including status, submission method, amount, and all important dates. Know where you are in every application.

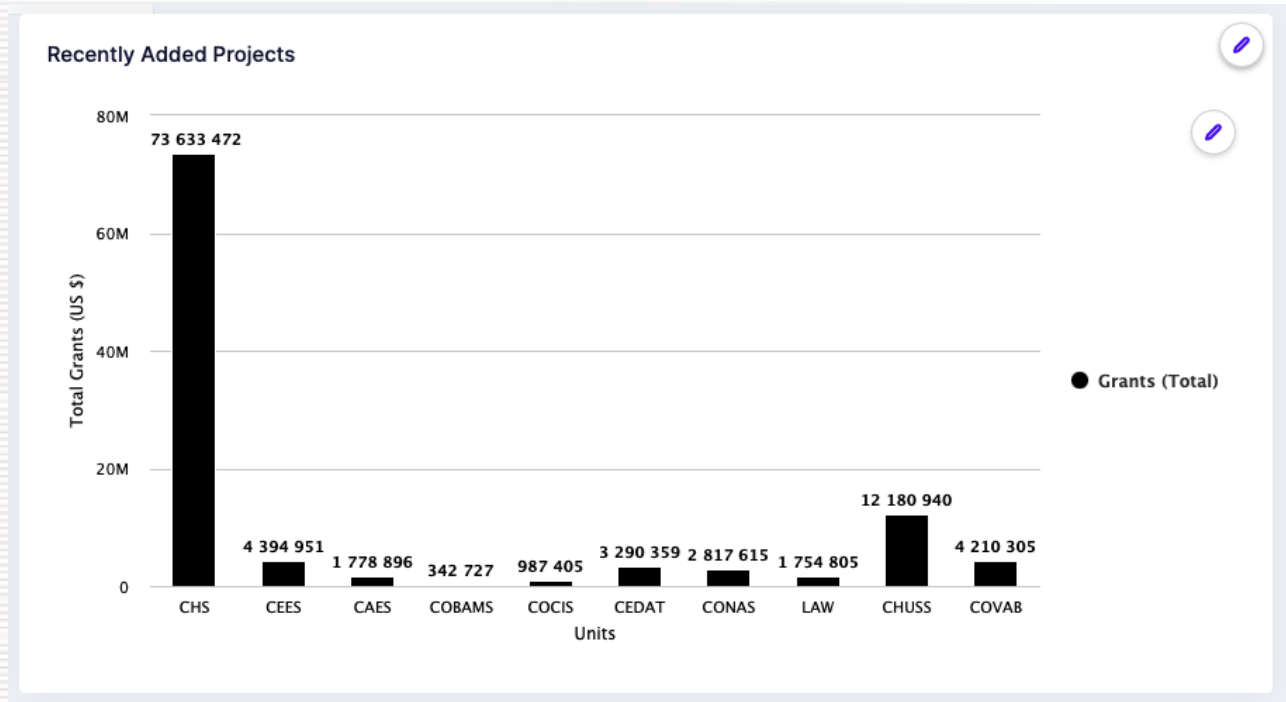

6. General Data Protection Regulation (GDPR)

Do you lock all your grant applications in a securely locked cabinet every evening? We doubt it. Most online grant management software solutions are up to date with the latest [online security protocols](#).
